00 OVERVIEW

# Xiren — Investment Highlight Summary

Next-Generation Marine Performance Platform ·

| Raise | Post-Money Valuation | Investor Equity |
| --- | --- | --- |
| £5M | £15M | ~33% |

> Xiren is not a yacht brand. It is a next-generation marine performance platform — one decade in the making, Built to operate across private luxury, premium commercial mobility, and defence applications.

## The Engineering Foundation

At the core of Xiren is a proprietary hull architecture that removes the trade-offs that have constrained marine design for decades. Speed versus stability. Comfort versus efficiency. Aesthetics versus capability. These were not engineering inevitabilities — they were unexamined assumptions. Xiren proves them wrong.

**55–60%**
Fuel Efficiency Gain

**70%**
Seakeeping Improvement

**>1,000**
Hours of Sea Trials

**10 Years**
In Development

**£3M**
Invested in R&D

> **"The comparative reduction in drag provided by the Xiren platform is significant... a monohull would require up to 55% more horsepower to reach the same speed. Xiren will be able to maintain speed in higher sea states with less acceleration and slamming, making it significantly more economical and substantially more comfortable to passengers."**

> **Mark Downer, MD Griffon Marine**

01 THE PLATFORM

# The Propulsion Enabler

Alternative propulsion systems fail in high-performance marine craft because the energy problem is never addressed at source. Xiren solves this through hull geometry — materially reducing drag so that hybrid, electric, and hydrogen systems become viable without significantly compromising performance. High-performance combustion propulsion leads today; every future propulsion pathway is already supported by architecture.

### The marine industry has evolved incrementally:

- More horsepower
- More stabilisation systems
- More complexity

> Xiren does not optimise legacy hulls.
> It **redefines the underlying geometry**.

### This matters commercially:

- Lower drag → lower operating cost
- Higher stability → more usable operating days
- Predictability → reduced risk (private, commercial, defence)

> Competitors rely on **added systems** to compete.
> Xiren achieves performance through **integration at the hull level**.

## This creates:

> Lower maintenance burden

> Greater reliability

> Performance that persists across conditions

01 THE PLATFORM

# Three Vessels. One Platform.

Each vessel is a distinct expression of the same hydrodynamic DNA. Engineering continuity preserves development efficiency, simplifies certification, and compounds learning across the portfolio. Xiren does not operate three independent product lines — it operates one scalable performance architecture expressed across markets.

| Vessel | Market | Sell Price | Build Cost | Gross Margin |
|---|---|---|---|---|
| Lux24 (24m) | Private + Premium Commercial | £4.6M | £2.65M | **42%** |
| 18m Class | Private Leisure | £3.125M | £1.875M | **40%** |
| X12 | Defence & Government | £2.25M | £1.225M | **46%** |

# Why Xiren Is Difficult to Replicate

The premium marine market does not reward incremental refinement. It rewards differentiation — vessels that are recognisable, credible under real conditions, and aligned with the identity of their owners. When that differentiation is visible and validated, pricing power follows.

## Design as Brand Gravity

Under the design leadership of Frank Stephenson — whose prior work at McLaren, Ferrari, and Maserati redefined premium automotive design — Xiren brings cross-sector authorship rarely seen in marine. The result is a vessel that is immediately recognisable, impossible to confuse with anything else on the water, and enduring rather than trend-driven.

### Hull Geometry Advantage

Inherent — not dependent on active systems, appendages, or narrow operating conditions.

### Decade of Validated Development

Over a decade of validated, documented development creates an institutional barrier that capital alone cannot compress.

### Design Authority

Frank Stephenson's involvement is not a styling decision — it is a strategic moat rarely available in the marine sector.

### Independent Validation

Griffon Marine provides third-party engineering credibility that competitors cannot simply claim.

### Brand Architecture

Built on scarcity and controlled exposure — resists commoditisation by design.

## Why Conventional Competitors Fall Short

| Competitor Type | Limitation |
|---|---|
| Traditional Monohulls | Efficiency and comfort degrade rapidly as conditions worsen. More power and displacement add cost without addressing the underlying hydrodynamics. |
| Catamarans | Slamming, structural loading, and inefficiency at speed remain persistent. Static stability does not translate to performance in adverse sea states. |
| Foiling Craft | Performance only within narrow operating envelopes. Mechanical fragility and high maintenance overhead make them unsuitable for reliability-critical use. |

# Commercial Model & Go-to-Market

Xiren is intentionally structured as a high-value, low-volume business. Value is concentrated through differentiation, scarcity, and disciplined production pacing — not through broad distribution or price-led competition.

### Go-to-Market

Sales are relationship-driven, with direct founder and brand-level engagement maintaining pricing discipline and client qualification at every stage. Traditional dealer networks are avoided. A small number of curated broker relationships serve as trusted facilitators — not independent channels — within the ultra-high-net-worth ecosystem.

The launch approach mirrors the brand philosophy: private unveilings for a highly selected audience, destination-led events, and controlled media exposure. Presence without commoditisation.

### Geographic Sequencing

Initial market entry is anchored in the EU and UAE — a concentration of ultra-high-net-worth individuals, a mature appreciation for radical design, and global visibility within luxury mobility culture. This is not a geographic dependency; it is a high-signal launch environment that accelerates international credibility.

Expansion into North America, and Asia-Pacific follows once brand reference is established.

## Revenue Architecture

Revenue is not limited to hull sales. The model compounds over time through:

#### Xiren Care

Extended warranty and service agreements expanding with the fleet.

#### Servicing Revenue

Growing recurring income as the installed fleet expands.

#### Vantaris Licence Commissions

From the X12's engagement with defence and government operators.

#### Bespoke Co-Creation

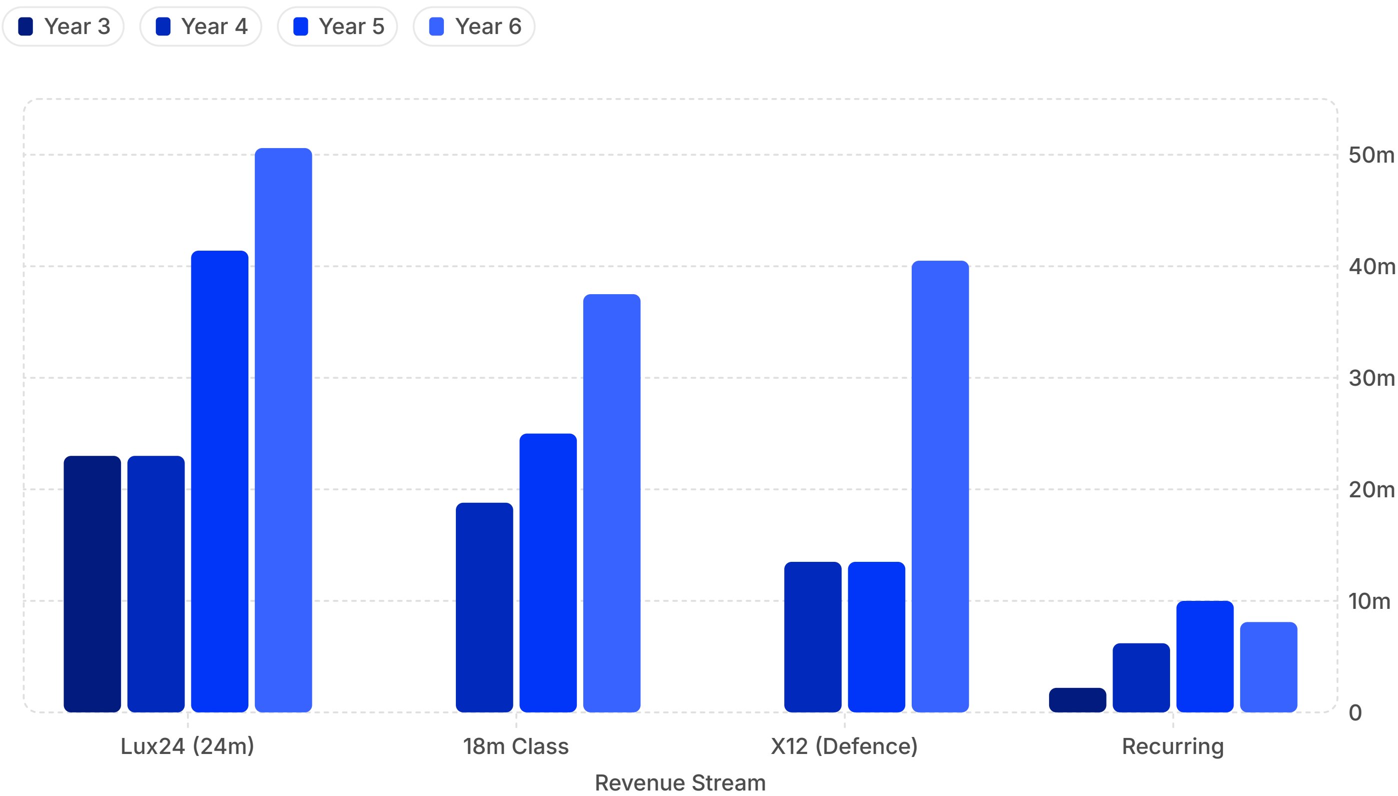
Direct design sessions with Frank Stephenson, limited architectural editions, and one-off treatments priced at a significant premium to base vessel value.

**Platform Validation Beyond Luxury:** Through engagement with Vantaris, the X12 was evaluated by the Portuguese Navy's Head of Innovation, who described the platform as *'the platform NATO needs.'* This is not presented as procurement commitment — it is independent institutional validation of the platform's core attributes under demanding operational criteria.

04 FINANCIAL PROJECTIONS

# Revenue Growth

Revenue scales deliberately — from a zero-revenue pre-launch position today to self-sustaining operations by Year 4. The model is not reliant on defence revenue to justify the base leisure case; defence materially strengthens the upside.



| Revenue Stream | Year 3 | Year 4 | Year 5 | Year 6 |
|---|---|---|---|---|
| Lux24 (24m) | £23.0M | £23.0M | £41.4M | £50.6M |
| 18m Class | — | £18.8M | £25.0M | £37.5M |
| X12 (Defence) | — | £13.5M | £13.5M | £40.5M |
| Recurring (Care, Licensing, Service) | £2.2M | £6.2M | £10.0M | £8.1M |
| **Total Revenue** | **£25.2M** | **£47.9M** | **£89.9M** | **£136.7M** |

04 FINANCIAL PROJECTIONS

# Profit & Loss Summary

| | Year 3 | Year 4 | Year 5 | Year 6 |
|---|---|---|---|---|
| Total Revenue | £25.2M | £48.0M | £89.9M | £136.7M |
| Gross Profit | £8.6M | £15.6M | £41.4M | £57.2M |
| Gross Margin % | ~34% | ~33% | ~46% | ~42% |
| **EBITDA** | **£2.4M** | **£5.6M** | **£24.8M** | **£34.4M** |

## Unit Delivery Schedule

| Model | Y3 | Y4 | Y5 | Y6 | Total (Y3–Y6) |
|---|---|---|---|---|---|
| Lux24 (24m) | 5 | 5 | 9 | 11 | 30 |
| 18m Class | — | 6 | 8 | 12 | 26 |
| X12 | — | 6 | 6 | 18 | 30 |
| **Total Units** | **5** | **17** | **23** | **41** | **86** |

## Key Milestones

### Year 3

First Lux24 deliveries · Positive EBITDA

### Year 4

Positive cumulative cash flow · 18m class deliveries begin

### Year 4/5

X12 defence deliveries begin

### Year 6

£133M revenue run rate

Peak funding requirement is approximately £5M. No further equity is required in the base case. The model is capital-efficient, margin-led, and does not carry disproportionate fixed costs.

# Where Xiren Has Come From

Xiren did not begin as a clean-sheet venture. The founders took ownership of an earlier programme that was technically promising but commercially undisciplined — one that lacked the focus, rigour, and follow-through required to reach production reality. Rather than abandon the opportunity, they chose to take personal responsibility for it.

What followed was years of sustained, often unglamorous work: stabilising the technology, interrogating its true performance potential, and rebuilding the programme from first principles. Over this period the founders took on personal capital and credibility risk, invested in independent validation, and deliberately surrounded the programme with best-in-class partners — Griffon Marine for engineering, Frank Stephenson for design, ENATA for manufacturing, and EPTechnologies, PlusZero and AICH2 for propulsion.

Xiren exists today because its founders were unwilling to let a genuinely differentiated platform fail through neglect, compromise, or inexecution.

## Where Xiren Is Now

→ Hull architecture validated through **>1,000 hours of sea trials** and **>10,000 nautical miles** of real-world operation.

→ Independent engineering validation complete alongside **Griffon Marine**.

→ Design programme under **Frank Stephenson** authored and in execution.

→ Manufacturing partnership with **ENATA** — a 100,000 sqm aerospace-grade composite facility in Abu Dhabi — identified and aligned.

→ Propulsion partnerships (electric, hybrid, hydrogen) confirmed on a **no-fee collaborative basis**, reflecting shared conviction in the platform.

→ X12 evaluated by Portuguese Navy's Head of Innovation and described as '**the platform NATO needs.**'

# The Raise

Xiren is seeking **£5 million of growth capital** at a **£15 million post-money valuation**. This raise does not fund invention. The invention is complete. It funds one clear and singular objective:

> "To build, certify, and launch the first production Xiren vessel — and to establish the brand at its intended level from day one."

## Capital Deployment

**Production Vessel One**
The Lux24

**Class Certification**
Regulatory readiness

**Manufacturing**
Workflow finalisation

**Brand Launch**
Experiential introduction

**Commercial Engagement**
Priority markets

Upon completion of this phase, Xiren will hold a tangible, certified, high-value reference asset; a validated and repeatable production process; a globally introduced brand; and early order momentum — with all principal execution and credibility risks behind it.

## Valuation Context

At a £10 million pre-money valuation, investors enter prior to first delivery, prior to first public reference, and prior to first revenue. The asymmetry is structural: limited downside against a validated platform with a clear execution path, and material upside as narrative converts to reference, reference converts to demand, and demand protects margin.

| Year 3 | Year 4 | Year 6 |
|---|---|---|
| £25M Revenue · Positive EBITDA | £48M Revenue · Positive Cash Flow | £137M Revenue · £34M EBITDA |

> "Xiren is early enough to feel undiscovered. Proven enough to feel safe. Structured enough to compound. This is not a bet on concept. It is a bet on execution of a validated platform."
