

Vantaris

SOVEREIGN AUTONOMY INFRASTRUCTURE FOR MARITIME DEFENCE

Vantaris develops sovereign-grade command and control systems for unmanned and optionally-manned maritime platforms. The company's proprietary **ARC (Autonomous Remote Command) architecture** enables secure, ultra-low latency control of autonomous vessels and mission systems.

Vantaris has been **selected by the Portuguese Navy and Ministry of Defence for a multi-phase co-development programme** to deliver next-generation unmanned maritime capability, leading to operational demonstration at NATO's **REPMUS 2026 exercise**.

This programme validates the technology in a live operational environment while positioning the company for NATO and allied procurement pathways.

The Technology - ARC – Hardware-Level Autonomy

ARC is a proven, proprietary **bare-metal System-on-Chip autonomy architecture**, designed specifically for sovereign defence environments.

Key Characteristics

- Sub-0.1 second response time
- Instant system boot (<0.2 seconds)
- Hardware-level security with no external OS dependencies
- Full integration of propulsion, navigation, sensors and weapons
- Seamless interoperability - Platform and payload agnostic

Why ARC is Different

Unlike conventional autonomy stacks built on layered operating systems, ARC executes commands directly at the hardware level, dramatically reducing latency and cyber vulnerability.

Co-Development Programme

Vantaris is currently executing Phase 1 of the Portuguese Navy Programme.

1	2
Phase 1 3D printed 8.4m multi-mission USV integrating ARC autonomy • ISR • Swarm operations • HVU protection • Contested-environment deployment	REPMUS 2026 The platform will be demonstrated at REPMUS 2026, NATO's largest unmanned systems exercise, providing exposure to procurement teams from over 20 NATO nations.

Market Opportunity

Autonomous maritime systems are rapidly becoming a core capability within all maritime defence forces.

Estimated demand across NATO, EU and GCC markets is driven by:

- Seabed infrastructure protection
- Persistent ISR missions
- Cost-efficient force multiplication
- Swarming and distributed naval capability

Procurement Opportunity

Early NATO adoption programmes alone represent an estimated **\$300M–\$800M** procurement opportunity within the first five years, as allied navies rapidly deploy tactical USVs for ISR, seabed infrastructure protection, and distributed maritime operations.

Commercial Model

Vantaris combines a platform ecosystem with high-margin autonomy infrastructure. The ARC system becomes the vessel's permanent command backbone, enabling software upgrades, fleet management and recurring support revenue throughout the operational life of each platform.

Revenue Stream	Description	Price	Gross Margin
ARC Autonomy Hardware	Integrated ARC-1, ARC-2 or ARC-3 autonomy systems supplied with each vessel, providing command, navigation, sensor fusion and mission execution capability.	€105k – €175k per vessel	~80%
Vessel Platform (Phase 1)	8.4m multi-mission unmanned surface vessel supplied as the primary deployment platform for ARC systems.	€215k per vessel	~25%
Through-Life Support (TLS)	Software updates, system monitoring, maintenance support and fleet optimisation services delivered across the operational life of each platform.	€32k – €39k per vessel annually	~55%
Training & Certification	Operator and maintainer training programmes enabling rapid deployment and operational readiness for naval and security personnel.	€40k - €50k per cohort	~80%

A fully integrated vessel (including ARC) represents approximately **€320k–€390k revenue per unit**.

Investment Opportunity

Vantaris is raising **€750k Seed Funding** to complete Phase 1 and deliver the REPMUS demonstration.

Capital Will Fund

- Final platform integration
- ARC system deployment
- Sea trials and NATO validation
- Operational readiness for REPMUS

Round Status

€300K

Committed

€750K

Total Raise

 This round provides investors with entry ahead of a major validation milestone, after which the company intends to raise Series A to scale production and deploy ARC across fleets.

Financial Trajectory Summary

Item	2026	2027	2028	2029	2030
8.4m Revenue	€500,000	€11,375,000	€16,250,000	€30,000,000	€63,750,000
X12 Revenue	—	—	€7,666,666	€34,499,999	€68,999,997
Total System Revenue	€500,000	€10,375,000	€24,916,666	€68,999,999	€141,750,001
TLS Revenue	€0	€1,087,500	€2,212,500	€4,262,500	€13,587,500
Training Revenue	€0	€540,000	€450,000	€450,000	€2,340,000
TOTAL REVENUE	€500,000	€12,002,500	€27,579,166	€73,712,499	€157,677,501
System Costs (Inc X12 Licence Fee)	€0	€4,639,987	€15,958,327	€49,975,004	€89,874,973
TLS Costs	€0	€489,375	€995,625	€1,918,125	€6,114,375
Training Costs	€0	€108,000	€90,000	€90,000	€468,000
COSTS	€0	€5,237,362	€17,043,952	€51,983,129	€96,457,348
Gross Margin	€500,000	€6,765,138	€10,535,214	€21,729,370	€61,220,153
OPEX	€596,000	€1,741,300	€2,951,860	€4,744,316	€6,035,488
EBITDA	(€96,000)	€5,023,838	€7,583,354	€16,985,054	€55,184,665
